

# JITTERBUG FMJ

## Full Metal Jacket

Carbon-Loaded for Noise-Dissipation

For years, AudioQuest's much-applauded original JitterBug USB Data & Power Noise-Filter has been bringing more fulfilling sound to many thousands of music lovers.

Now, **JitterBug FMJ**, with its **Full Metal Jacket**, provides even more improvement.

FMJ's properly-drained metal case effectively shields against external radio-frequency noise, and its hinged RF-absorbing carbon output-cover optimizes in-parallel performance.

Use JitterBug in-series, in-parallel or both — wherever you have USB ports. Enjoy it with a mobile phone, computer, car's USB port, "service-only" USB port, Ethernet Streamer, etc.

One can't directly hear our modern world's pervasive RF Noise, or the noise generated internally by computers and power supplies — but the interactions and parasitic noise it causes robs music and soundtracks of detail and dynamic contrast — burying much of music's precious subtlety.

Fight back with JitterBug FMJ.
